

Communication

Date	15 March 2024
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp	All team members	Share daily progress on data preprocessing, model training, and Flask app development; flag blockers immediately
2	Progress Update	Weekly	WhatsApp	All team members	Summarize weekly progress on feature engineering, model comparison (Logistic Regression, Random Forest, XGBoost, Decision Tree), and IBM Watson deployment
3	Issue / Bug Discussion	As Needed	WhatsApp	Team members involved	Discuss and resolve technical issues such as data cleaning errors, model accuracy problems, or Flask/IBM Watson deployment failures
4	Stakeholder Review	Bi-Weekly	WhatsApp	Team members and project mentor	Review overall project direction, share model performance metrics, and gather feedback on the web application
5	Final Demo Rehearsal	Once	WhatsApp (Video Call)	All team members	Rehearse the final demo of the credit card approval prediction web application before presentation to evaluators
6	Code Review	As Needed	WhatsApp	Developers	Review and approve code changes before merging into the main project repository

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Coordinating live meetings was difficult since team members had different class and work schedules.	Used a dedicated WhatsApp group for asynchronous daily and weekly updates so everyone stayed informed regardless of availability.
2	Miscommunication around the feature engineering logic for converting multi-class payment status codes into binary risk labels.	Shared code snippets and screenshots of the preprocessing pipeline over WhatsApp, followed by a short voice call to clarify the logic.
3	Delayed responses during the model evaluation phase while comparing Logistic Regression, Random Forest, XGBoost, and Decision Tree results.	Set WhatsApp reminders and used polls to collect timely model performance updates from each team member before the review deadline.
